

CLAIMS.

1. A method of delivering goods between a consignor and a consignee in which

5 a) the consignor and consignee agree to the conditions of transport and storage of the consignment including the maintenance of the temperature of the consignment

b) the agreed conditions and consignment details are entered into a central database accessible by the consignor and consignee

10 c) at least one condition sensing datalogger capable of sensing the agreed conditions including temperature are attached to the consignment

d) the data logger is programmed to sense the conditions at agreed intervals and to store the readings or transmit the readings to said central database

15 e) the consignee upon receipt of the goods reviews the datalogger memory or the transmitted readings and determines if the agreed conditions have been complied with

f) the consignee then enters into said database whether the conditions have been complied with or not.
